Rabbit Resources: How to Cope

Add lots of rabbit food to your yard.

- #1 Plant native plants densely, using grasses and sedges as green mulch. See the list below.
- #2 Make the turf in your lawn into a bee lawn by adding white clover, violets, creeping thyme, and flowers, like self-heal (Prunella vulgaris) Enjoy watching rabbits munch on your lawn rather than your gardens.

In front of your garden, lay down chicken wire on the ground. it seems rabbits refuse to set foot on the wire.

Plant more vulnerable plants in among plants that may shield them, such as native sunflowers or New England asters.

Choose plants that are naturally rabbit-resistant. Most rabbit-repellent plants feature one or more of the following

characteristics that make them less appealing as rabbit food:

- Unpalatable foliage that is spiky, jagged, prickly, fuzzy, or leathery
- Toxic flowers
- Leaves, stems, and flowers with strong fragrance
- Stems with an abundance of sticky sap

List of Suggested Plants

Anise Hyssop (Agastache foeniculum)

Alliums (Allium cernuum, A. tricoccum)

Beardtongue (Penstemon digitalis)

Bee Balm (Monarda fistulosa, M. didyma)

Black-eyed Susan (Rudbeckia hirta, R. fulgida)

Butterfly Milkweed (Asclepias tuberosa)

Columbine (Aquilegia canadensis)

Coreopsis (C. palmata, C. lanceolata)

Dutchman's Breeches (Dicentra cucullaria)

Elderberry (Sambucus)

Foamflower (Tiarella cordifolia)

Goldenrods (Solidago rigida, S. speciosa, S. ulmifolia, etc.)

New England Aster (Symphyotrichum novae-angliae) and other asters

Prairie Alumroot (Huchera richardsonii)

Queen of the Prairie (Filipendula rubra)

Redbud (Cercis canadensis)

Ribes (Ribes americanum, R. missouriense)

Solomon's Seal (Polygonatum commutatum, P. biflorum)

Viburnum (Viburnum prunifolium, V. rafinesquinianum, V. lentago)

Virginia Creeper (Parthenocissus quinquefolia)
